# SENSATIONAL SURROUND SOUND

## MSub, MCenter, MSurround

Throughout the M-Series, only the best materials are used. Best in terms of acoustic performance and luxurious-feel. For example, their slim elegant design is finished with a choice of either high-gloss black or white piano lacquer, each with a luxurious leather-feel trim. The result is a sense of exclusivity and style that seduces not only the ears, but also the eyes.

### BMRs – Balance Mode Radiators (MCenter, MSurround)

Balanced Mode Radiators combine the latest flat panel loudspeaker technology with traditional pistonic-action techniques. The result is 180-degree sound dispersion and a soundstage that places each and every instrument and vocalist in their own fixed position. Everyone in the room - not

just those in the sweet spot - can enjoy the full effect of spectacular surround sound and a crystal-clear dialogues wherever they sit, with intimate, delicate details placed exactly where they were intended: just in front of them, far away, or right beside them whispering into their ear.

### MSub

The 10-inch high excursion subwoofer recreates low bass audio at high levels, while the dual 8-inch passive radiators ensure deep, clear and rich bass response. The effect is ultra-dramatic, thanks to the high power output of 500 watts rms, running up to an incredible 'room-shaking' 1,000 watts in peak performance. Importantly, the cabinet is fully closed, so there is no irritating bass reflex port noise. While the ultra-solid cabinet construction helps eliminate cabinet resonance so that you hear bass sound and no additional resonance. It's awesome.
